Professional Profile:

Aspiring Full Stack Developer seeking a first internship or entry-level opportunity in Software Development, with a strong focus on Front-End, Back-End, and MySQL database solutions. Currently pursuing a degree in Software Engineering, I am a proactive and well-organized individual with a solid foundation in React.js, Python, Flask, SQL, and programming logic. Highly motivated to continuously expand my technical skill set and eager to contribute meaningfully to innovative projects and collaborative development teams.

Career summary:

Throughout the first three semesters of my Software Engineering degree, I have contributed to multiple web development projects, gaining hands-on experience across diverse technologies and application domains. Notable projects include a betting platform built with Flask, RESTful APIs, and MySQL; a sustainability portal using the same technology stack; and a custom encryption system. I also developed a tree monitoring system for the city of Campinas using Java, Spring Boot, MongoDB, and MySQL. In addition, I have built React.js applications such as a cryptocurrency dashboard that consumes external APIs to display real-time pricing data, as well as a shopping cart application utilizing the Context API. I also possess experience with application build processes and deployment.

Education and qualifications:

Engenharia de Software – Puc Campinas

Period: August 2024 – August 2028

- Python, Flask, Html, Css, JavaScript, SQL, mySQL, React JS, Java, C, Git, Github

Languages:
- Intermediate English
